DETAILED ACTION
REASONS FOR ALLOWANCE

Claims 1, 3-4, 7-9, 22-29, 31-39 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to a method for storing content on a portable memory device and detaching the portable memory device from the recorder/playback device.

The following is a statement of reasons for the indication of allowable subject matter: The independent claim 1 identifies the uniquely distinct feature for "detaching the portable memory device from the recorder/playback device, thereby providing access to a secondary user interface on the recorder/playback device that is inaccessible when the portable memory device is attached;

displaying the image on the portable memory device while the portable memory device is detached from the recorder/playback device; and

displaying functional controls for the recorder/playback device while the portable memory device is connected to the recorder/playback device."

The following is a statement of reasons for the indication of allowable subject matter: The independent claims 24, 31 identify the uniquely distinct feature for "a display, in operative communication with the memory, which displays the image while the portable memory device is detached from the recorder/playback device; and

the display is configured to display functional controls for the recorder/playback device while the portable memory device is connected to the recorder/playback device, and the recorder/playback device comprising:

an image capture device; a secondary user interface that is inaccessible when the portable memory device is attached, but becomes accessible when the portable memory device is detached”

US 6,329,787 by Ito et al. discloses data can be received by a battery charging device while a portable information terminal powered by a secondary battery is connected to the battery charging device to charge the secondary battery. For data reception, the battery charging device has a tuner as a data reception circuit. While the portable information terminal is mounted in the battery charging device, the secondary battery is charged by the battery charging device, and the tuner receives a television wave containing a data broadcast. Data multiplexed in a video signal outputted from the tuner is decoded by a data decoding circuit, and stored into a data storage device of the portable information terminal. The data stored in the data storage device can be reproduced on a liquid crystal display unit of the portable information terminal when it is detached from the battery charging device.

US 6,757,479 by Niikawa discloses an image display device displays images at every frame for browsing without a trouble of assigning key information for image data of image files. In an operation for browsing contracted image data of an image file, if the number of image frames is large, the image display device increases a browsing speed by shortening a display time for one frame. Thus, a target image is found easily

Art Unit: 2621

and speedily.

US 2007/0271508 by Audet discloses a system and a method for organizing information elements in a system having a display capability which (a) generates a first information element vector based on a predetermined first characterization attribute, (b) generates a second information element vector based on a second characterization attribute, and (c) determines information elements displayed on the first information element vector and the second information element vector associated with a third characterization attribute; and (d) identifies the information elements associated with the third characterization attribute with at least one visual distinctive feature. Furthermore, the method allows a user to select the characterization attributes and to visualize the information element vectors.

None of the prior art, either singularly or in combination, fails to anticipate or render the above underlined limitations obvious. Claims 3-4,7-9,22-29, 31-39 are dependent on claims 1, 24 and 31 and therefore dependent claims also allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
